## **TECHNOLOGIES**

#### Removable Insole

The upper layer in contact with the foot is made of a highly resistant netting to ensure exceptional absorption of dampness. A selfforming antibacterial foam layer ensures comfort and correct support of the foot.

### Lateral stability

Ergonomic rigid internal structure. It houses the heel into the right seat, adjusting the foot support and control of the ankle sideways movements. It keeps the foot tight to the shoe, allowing the perfect fit.

### **Electrical features**

Wire Electricity Discharge

Strip with 4 filaments of carbon fiber, ensuring proven anti-static properties of the footwear over time.

#### **Protection elements**

# fibercap **SXt**

Composite toecap, reinforced with fiberglass. Structure with a variable thickness for better performances

# Torsional stability

Support made of rigid plastic material. It stabilizes the heel bone, the instep and tarsal joints, without altering energy absorption. A support for the natural movement of the foot; it provides comfort and greater

resistant up to 200,000 cycles. Makes the footwear more comfortable, blocking the foot during use.
